Header text:

Transforming scientific research into a tactile editorial experience through material experimentation and typography.

The Challenge:

Scientific information about natural landmarks is often difficult to connect with through traditional reports and diagrams.

The goal was to transform geological research into an experience that felt tactile, immersive, and visually engaging.

Design Approach:

Rather than relying on conventional infographics, I explored materiality as a storytelling tool. Soap, wax, plaster and clay were used to create experimental letterforms inspired by the textures and geological formations of Carlsbad Caverns.

These physical experiments were photographed and refined in Photoshop before being combined into a zine and infographic that translated scientific information into a more accessible visual language.

Materials: *Soap, Wax, Clay, Plaster*

Techniques: *Material Typography, Photography, Photoshop Manipulation, Editorial Layout, Information Design*

Outcomes:

The final publication brings together material experimentation, photography, and editorial design to tell the story of Carlsbad Caverns. Through handcrafted typography, geological research, and visual storytelling, the zine transforms scientific information into a tactile and engaging reading experience.

Skills - Brand Identity, Logo Design, Visual Identity, Branding, Collateral Design

Header text:

A comprehensive rebranding project that translates the rhythmic, handcrafted nature of pottery into a cohesive visual identity for a local small business.

The Challenge:

Many small businesses have a deep, personal story behind their craft, but their visual identity doesn't always reflect that narrative. For That Ikigai Project, a small ceramics business built around a passion for handmade pottery, the challenge was to develop a brand identity that stayed true to the owner's values while making the business more visually engaging and recognisable.

The existing branding needed to better communicate the handmade, playful, and intentional nature of the pottery-making process, while reflecting the unique experience behind each one-of-a-kind piece.

Design Approach:

I rebranded That Ikigai Project by drawing direct inspiration from the art and process of pottery. I explored the raw materials, tools, ceramic forms, and movement involved in creating each piece, experimenting with different ways to translate these elements into a visual identity.

The core of the new identity is an abstract spiral motif inspired by the rhythmic motion of a pottery wheel and the circular movement created while shaping clay. Rather than creating a literal representation of the wheel, I developed a more abstract form that allows the viewer to intuitively connect the logo with the process of pottery-making.

The identity was extended across a range of physical brand touchpoints, including an apron, stickers, and business cards, creating a cohesive system that felt both professional and personal.

Outcomes:

The final rebrand captures the handcrafted and experiential nature of That Ikigai Project through a visual identity rooted in the movement and process of pottery. The abstract spiral creates a direct connection between the brand and the potter's wheel, while the supporting collateral brings the identity into the physical world. Together, the elements create a cohesive brand experience that celebrates the rhythm, individuality, and simple joy of handmade ceramics.

Archive Fever**Side notes:**

Year - 2022

Tools - Adobe Illustrator, Adobe InDesign & Adobe Photoshop

Skills - Branding, Art Direction, Typography, Bilingual Design, Exhibition Design, Visual Identity

Team - Areen Eid

Header text:

A bilingual branding project that translates the abstract concept of “Archive Fever” into a dynamic visual identity for a graduating exhibition.

The Challenge:

The graduating cohort's final exhibition required a visual identity based on the theme “Archive Fever.” The challenge was to interpret two abstract and seemingly unrelated concepts—archive and fever—without relying on literal imagery or obvious visual metaphors.

The identity needed to communicate the theme in a way that felt contemporary, engaging, and meaningful, while also creating a cohesive visual system that could be applied across the exhibition. Working with both English and Arabic introduced an additional challenge of balancing visual hierarchy, readability, and consistency across two distinct writing systems.

Design Approach:

Working as part of a team, we explored the theme through abstraction, using the visual language of archival folders as a starting point. Simplified vector forms were developed to represent the idea of an archive, while their quantity, density, and movement were manipulated to express the intensity associated with fever.

As the forms accumulated and compressed, they created a growing sense of pressure, movement, and momentum, visually representing the escalating nature of a fever. This visual language was then adapted into a bilingual identity, allowing the English and Arabic typography to work together as part of the overall composition rather than functioning as separate translations.

Outcomes:

The final identity transforms the abstract concept of “Archive Fever” into a dynamic and flexible visual system. By combining archival-inspired forms with a sense of movement and accumulation, the branding communicates the tension between preservation and intensity. The bilingual approach extends this identity across English and Arabic, creating a cohesive exhibition language that reflects the diversity of the graduating cohort.

Skills - UI/UX Design, User Flow, Prototyping, Interaction Design, E-commerce Design

Header text:

Designing a museum experience that connects visitors with artists, artworks, and personalised merchandise through a simple and intuitive user flow.

The Challenge:

Museums often offer visitors multiple ways to engage with an exhibition, from discovering artists and viewing their work to purchasing merchandise. The challenge was to bring these experiences together within a single app while keeping the journey simple and easy to understand.

The project required five artists to be represented within the app, while focusing on one artist to demonstrate the complete user journey. Beyond the visual design, the goal was to create a clear flow that could be easily understood by a wide range of museum visitors, from discovering an artist through to purchasing and personalising merchandise.

Design Approach:

I designed the app around a straightforward journey: discover an artist, explore their work, find related merchandise, personalise a product, and complete the purchase. I chose Frida Kahlo as the featured artist and developed a personalised tote bag as the main merchandise experience.

The interface was structured to guide users naturally between each stage without overwhelming them with information. I used clear navigation, image-led content, and simple interactions to make the experience feel intuitive. The merchandise flow also included colour selection and personalisation, allowing users to add their name to the tote bag strap before moving through shipping and payment.

The User Flow:

Discover the Artists

The landing page introduces the five artists currently featured by the museum, giving users a clear starting point for exploring the collection.

Explore the Artist

The artist page brings together Frida Kahlo's artworks and related merchandise, using a carousel to make browsing the collection simple and interactive.

Personalise the Merchandise

Users can select their preferred tote bag colour—yellow, blue, red, or white—and add their name to the strap before purchasing.

Complete the Purchase

The checkout flow guides users through shipping and payment, keeping the final stages of the experience clear and straightforward.

Outcome:

The final prototype demonstrates a complete museum-to-purchase journey, combining exhibition discovery, artwork exploration, product personalisation, and checkout within one cohesive experience. The project focused on making the interface visually engaging while ensuring that each interaction had a clear purpose and the overall user flow remained easy to follow.

A student engagement platform designed to help students recognise their learning patterns and stay connected throughout the semester.

The Challenge

University learning management systems are effective at organising coursework, deadlines, and resources, but they often focus on what has already happened rather than helping students understand their engagement in the moment.

Student disengagement can happen gradually and silently. By the time attendance or academic performance shows a problem, opportunities to intervene may have already passed. Our challenge was to explore how engagement could be made more visible and actionable for both students and educators, without turning it into another task for students to manage.

Research & Insights

To understand how engagement breaks down throughout a semester, we conducted student interviews, surveys, and secondary research exploring learning behaviour, workload, and engagement patterns.

Our research showed that students were already using multiple tools to manage their university experience, while existing learning management systems provided limited insight into how they were actually engaging with their learning.

10/13

Students use external tools to stay organised.

80%

Of students attend classes but miss at least one class within the first three weeks.

Key insight:

Engagement can begin to drop early, but existing systems often only make these patterns visible after the problem has already developed.

User Needs

Students need a unified experience

Students were switching between multiple systems to stay organised.

→ A platform that brings engagement, reflection, and academic information together.

Students need visibility

Students were more comfortable with engagement tracking when it provided a clear personal benefit.

→ Transparent feedback that helps students understand their own engagement patterns.

Students need low-friction support

Disengagement was often connected to stress, isolation, and feeling overwhelmed rather than a lack of effort.

→ Simple ways to reflect, participate, and seek support before engagement declines further.

Client Needs

Early visibility into engagement

Educators currently have limited ways to identify emerging engagement issues.

→ Provide earlier indicators of changing engagement patterns.

Reduced monitoring effort

Educators cannot manually track the engagement of every student across large classes.

→ Use engagement data to highlight patterns without creating additional administrative work.

Measurable outcomes

Universities need to understand whether engagement initiatives are improving the student experience.

→ Create a system that makes engagement patterns easier to understand and evaluate.

Combined User & Client Need

Students and educators both need a clearer understanding of engagement, but from different perspectives. Students need to understand and manage their own learning, while educators need earlier visibility into patterns that may require support.

This created an opportunity for a feedback system that makes engagement visible, encourages participation, and helps both students and educators act before disengagement becomes a larger issue.

Design Approach

We designed ClassPulse as a lightweight engagement layer that works alongside existing university systems rather than replacing them.

The experience was built around a continuous feedback loop: students check in after class, reflect on their experience, view their engagement patterns, and communicate through an anonymous forum. Educators can use the resulting engagement information to identify broader patterns and potential areas of concern.

The interface was designed around short interactions and clear visual feedback, reducing the effort required to participate while keeping the experience useful throughout the semester.

The Solution

Post-Class Check-in

A quick check-in gives students an opportunity to reflect on how they experienced a class while it is still fresh. The interaction is intentionally short to make regular participation realistic.

Journal

Students can add private notes, images, or reflections to their check-ins, creating a personal record of their learning experience over time.

Track Engagement

Students can view their attendance and participation patterns, making their engagement more visible. Educators can also identify broader patterns that may indicate a need for support.

Anonymous Forum

Students can ask questions and participate without attaching their identity to the discussion, creating a lower-pressure space for communication.

Outcome

The final ClassPulse prototype creates a continuous feedback loop between students and educators. Rather than simply recording attendance or completed work, the platform helps students understand their own engagement while giving educators earlier visibility into emerging patterns.

The project demonstrates how research into student behaviour can be translated into a digital experience that makes engagement more transparent, actionable, and easier to maintain throughout the semester.

Why Axis — Internship

Side notes:

Year - 2024

Company - Why Axis, Bangalore

Tools - Adobe Photoshop, Adobe Illustrator & Adobe InDesign

Skills - Graphic Design, Social Media Design, E-commerce Design, Visual Communication, Advertising

Header text:

A multidisciplinary design internship creating digital, social media, and promotional content for brands across e-commerce, skincare, and jewellery.

The Experience

During my internship at Why Axis, I worked across a range of commercial design projects, creating visual content for different brands and platforms. My work included e-commerce graphics, social media content, product communication, and promotional artwork, giving me experience adapting design for different audiences, purposes, and brand identities.

One of my main projects was supporting NuEssentials as the supplement brand expanded into skincare. I also worked on promotional content for Bluestone Jewellery towards the end of my internship.

The Challenge

Working across different brands meant adapting to different audiences, purposes, and visual identities while communicating information clearly. For NuEssentials, the challenge was to support the brand's move into skincare and appeal to a new customer group through both e-commerce and social media. For Bluestone, the focus was on communicating weekly jewellery promotions in a polished and attention-grabbing format.

Design Approach

For NuEssentials, I created a range of Amazon product page graphics covering ingredients, benefits, usage instructions, and other key product information, as well as Instagram posts introducing the skincare range and building awareness among new customers. I focused on making information easy to understand while keeping the products visually prominent and the content consistent across platforms.

For Bluestone, I designed the weekly deals poster, working with product imagery and promotional information to create a clear composition that balanced the offer with the jewellery and maintained the brand's premium feel. Together, these projects gave me experience designing for both informative and promotional purposes across different commercial brands.

NuEssentials — Amazon**Product Information**

Clear visual layouts communicate ingredients, benefits, usage, and key product information to help customers make informed purchasing decisions.

Product Benefits

Information was organised into digestible sections, making product benefits easier to understand while maintaining a consistent visual language across the Amazon page.

NuEssentials — Instagram

Building Brand Awareness

Social media graphics introduced the new skincare range to potential customers through product-focused and educational content designed for a new target audience.

Bluestone — Weekly Deals

Promotional Design

Towards the end of my internship, I designed the weekly deals poster for Bluestone Jewellery, using product imagery and promotional information to create a clear and polished advertisement while maintaining the brand's premium feel.

Outcome

The internship gave me experience working across multiple commercial design needs, from detailed e-commerce communication and social media content to promotional advertising. The final work supported NuEssentials' skincare launch and created promotional content for Bluestone, while helping me develop a more flexible approach to designing for different audiences, platforms, and brand identities.

Motion & Animation

Side notes:

Year - 2022

Tools - Adobe After Effects, Adobe Illustrator & Adobe Photoshop

Skills - Motion Design, Animation, Storytelling, Visual Communication

Header text:

Early experiments in motion design exploring animation, advertising, and visual storytelling through Adobe After Effects.

The Challenge

These projects were my first introduction to Adobe After Effects, completed before choosing my design specialisation. The brief was to experiment with motion as a way of communicating an idea, while learning the fundamentals of animation, timing, transitions, and visual storytelling.

Although I was still finding my way around the software, I enjoyed the challenge of translating static design ideas into moving visuals and exploring a medium that was very different from the graphic design work I was used to.

Design Approach

For the first project, I created a fictional lip balm brand and developed a 20-second advertisement around three different flavours. I wanted the video to have a bright,

summery feeling, using colour, product imagery, and movement to create an energetic advertisement. This project became an opportunity to experiment with basic animation and learn how movement could change the way a product is presented.

For the second project, we were asked to choose a social issue and communicate information through an infographic video, including an AI-generated voice-over. I chose a more serious visual direction, using black, grey, and red to create a sense of urgency and reinforce the subject matter. I experimented with combining typography, graphics, information, and movement to make the content easier to follow as a short-form video.

Project 01 — Lip Balm Advertisement

20-second product advertisement

A fictional lip balm brand with three flavours, designed around a bright and summery visual direction. The project focused on experimenting with product animation, transitions, and timing to create a short promotional video.

Project 02 — Social Issue Infographic

Animated information video

An infographic video exploring a social issue through motion, typography, and visual information. A darker colour palette of black, grey, and red was used to reinforce the seriousness of the topic, alongside an AI-generated voice-over to guide the viewer through the information.

Outcome

These projects were an early exploration of motion design and my first experience working with After Effects. While I was still developing my technical skills, the projects helped me understand how movement, timing, colour, and sound can influence the way information and ideas are communicated.

More than polished animation pieces, these projects represent my experimentation with a new medium and the process of learning through making.

Crochet

Main text:

Outside of design, I enjoy trying different crafts and making things by hand, but crochet is the one that has stuck with me the most. It started as a hobby and a way to pass the time, and has gradually become what I spend most of my free time doing. I enjoy experimenting with different colours, patterns, and projects, and this is a small collection of some of the things I've made over time.

Painting

Main text:

Painting has been part of my life since I was young and was one of the things that first drew me towards design. I've always enjoyed experimenting with colour, composition, and different ways of creating an image. Although my interests have grown into other areas of design over time, painting is where my interest in making and visual creativity began.
